

Final Dough		Baker's Formula		
Ingredient	Final Dough Mix Quantity (g)	Quantity in Levain (g)	Total Recipe Quantity (g)	Baker's Percentage (%)
All purpose white flour	434	16	450	90
Whole wheat flour	46	4	50	10
Water	370	20	390	78
Fine sea salt	11	0	11	2.2
Levain*	40	NA	NA	4 <sup>†</sup>

Note:

1) Feed your starter with 70 degree water and keep it at room temperatue for about 11 hours until it has doubled in size from the build-up of gas. If the starter smells like over-ripe fruit you will end up with a more buttery flavour. If the starter goes longer, it will begin to have a vinergary smell, and the final loaf will be more sour.

2) Mix the flour and 90-95 degree water in a tub and let it autolyse for about 30 minutes before incorporating the levain and salt. The target temperature of the dough at the end of the final mix is 77-78 degrees.

3) Bulk ferment the dough until it has not quite doubled in volume. Build up the dough's gluten structure by performing four stretch-and-folds at 30 minute intervals during the bulk ferment's first two hours.

4) After the bulk ferment, preshape the dough into a round with a slight amount of tension, and let it bench-rest for 15 minutes.

5) Create a batard or boule (see <https://www.youtube.com/watch?v=O6lNjgO91mg&t=130s> shaping technique) and place it seam-side up in a 50% flour/50% rice flour seasoned proofing basket. Loosely cover the proofing basket (a disposable plastic shower cap works well!) and put in a refrigerator to proof for 12-14 hours.

6) Preheat your baking vessel (see <https://challengerbreadware.com/product/challenger-bread-pan/> for my recommendation) in the oven for an hour at 450 degrees. Place your proofed bread in the baking vessel and score. If there is enough room without touching the bread, put in an ice cube for extra steam. Bake for 20 minutes.

8) After 20 minutes remove the baking vessel cover and bake for another 25 minutes, or until your desired crust color is achieved.

\* 1 part mature, active starter; 1.6 part all purpose white flour; 0.4 part whole wheat flour; 2 part water

<sup>†</sup> The baker's percentage for levain is the amount of flour in the levain expressed as a percentage of the total flour in the recipie.
